

Vendors Sought for Arts Council's Christmas in November Sale

It's back! The Anson County Arts Council's annual Christmas in November Art & Crafts fair returns for its tenth at South Piedmont Community College's Lockhart-Taylor Center, located at 514 North Wadhington Street in Wadesboro. It will take place on Saturday, November 13, from 10 a.m. until 2:30 p.m. All kinds of wonderful creations by area artists and craftsmen will be featured.

Tables are available for \$45, or \$80 for two. Vendors keep 100% of their sales proceeds.

Any artist or craftsman interested in participating in this event should contact the Arts Council at ansonart@windstream.net or 704-694-4950.

No commercial products, please. This event is showcasing the talents of the creative community.

Pest Watch in NC: Asian Giant Hornet

The Asian giant hornet, *Vespa mandarinia* Smith, is an invasive hornet that was first detected in the United States in Washington State near the Canadian border in December 2019. The pest is native to Asia and is a major threat to honeybees. This pest is not known to occur in North Carolina, but early detection is critical for protecting North Carolina honeybees and agriculture.

Threat This insect is major pest of honeybees. A few hornets can rapidly destroy an entire beehive and occasionally they will attack other insects as well. They generally do not attack people or pets but can sting so exercise caution around unknown wasps and hornets. They are social insects but only the queen can disperse and spread populations.

Identification Asian giant hornets are the largest species of hornet in the world. They are 1.5-2 inches in length. Their heads are yellow-orange with prominent eyes. They have a black thorax (the area where the wings and legs attach) and an abdomen with black and yellow stripes. Please see below for information about common look-alikes.

Signs and Symptoms These hornets decapitate honeybees and destroy entire hives. If you see piles of dead bees that is potentially a sign of this pest. Asian giant hornets nest underground which can make locating nests challenging. Nests can also be found under leaves, brush, in tree trunks, and other hidden locations.

What to Do Collect a specimen. If you suspect you have found an Asian giant hornet and can safely collect a specimen you can submit them to the NCSU Plant Disease and Insect Clinic.

Take a picture: Rather than trying to collect a specimen you can take a photo. If possible, include a size reference like a coin when submitting photos. Please exercise caution when approaching stinging insects.

How to submit: Details on submitting insects and photos can be found at: projects.ncsu.edu/cals/plantpath/extension/clinic/.

Look-alikes There are many look-alike species that occur in North Carolina and do not convey the same threat as this species of hornet. Two of these, the European hornet and the cicada killer, are commonly mistaken for the Asian giant hornet. Please visit entomology.ces.ncsu.edu/murder-hornet-comparison/ for a side-by-side comparison of Asian Giant Hornet to common look-alikes.

NC STATE UNIVERSITY

The following are some insects that might be confused for the Asian giant hornet (top left) which is not in North Carolina at this time. The remaining insects are native or established in NC and many surrounding states. Proper identification is crucial as it is not necessary to kill these insects.

Don't let leg pain slow you down.

One in every 20 Americans over the age of 50 suffers from PAD - a condition caused by plaque or fatty deposits in the arteries that limit blood flow to the legs and feet. This puts them at greater risk for heart attack, stroke and limb loss.

Symptoms of Peripheral Arterial Disease (PAD)

- PAIN
- ACHING
- NUMBNESS
- DISCOLORATION
- BURNING SENSATION
- SWELLING

Call (704) 226-0531 for your PAD assessment today!
